

Installing GroupWise Administration

The GroupWise® Administration component extends the tree's NDS™ schema, updates the GroupWise Administrator snap-in for NetWare® Administrator, installs the GroupWise Administrator snap-in for ConsoleOne™, and copies the agent, client, WebAccess, Internet Agent, and Monitor software to the software distribution directory.

SYSTEM REQUIREMENTS

- GroupWise 5.5.
- ConsoleOne 1.2 or later, which requires a Windows* 95/98/NT workstation with at least 64 MB RAM.

PREREQUISITES

- If you want to use the GroupWise Administrator snap-in for ConsoleOne, make sure you have ConsoleOne 1.2 or later installed. You can install ConsoleOne 1.2b from the Enhancement Pack CD.
- Stop all agent and client software that is running from the software distribution directory you will be updating.

INSTALLATION

1. At a Windows 95/98/NT workstation, log in as an Admin equivalent to the NDS tree where your GroupWise 5.5 system is installed.
2. Insert the GroupWise 5.5 Enhancement Pack CD into the CD drive.
3. If the installation program does not start automatically, run SETUP.EXE from the root of the CD.
4. Click Install Products to display the list of Enhancement Pack components.
5. Click GroupWise Administration.
6. Click Install GroupWise Administration to launch the GroupWise Administration installation program.
7. Follow the installation prompts.

If you have users who run the GroupWise client for Windows 95/98/NT from the software distribution directory and you don't want them to have access to it until you've updated the administration and agent software, you should not install the client software at this time. After you've updated the administration and agent software, rerun the installation program to install the client software.
